

Stub Axle Stem Insights

v 18.1

Least Grip

Most Grip

SOFT

The 'Blue' type is typically used when drivers are trying to reduce front tire performance and move grip balance to the rear. (Least Grip)

STANDARD

The 'Yellow' type is actually non-painted and comes standard in all COMPKART 25mm Stub axles. (Most Utilized)

HARD

The 'Pink' type is most often the first option driver utilize when looking to get more out of the front tires. (More Grip)

S HARD

The 'Hard' type is utilized when the driver prefers a more direct feel with the front tire. The driver must be more precise to manage the tire with this stub axle stem. (Most Grip)

We recommend utilizing COMPKART factory standard 'Yellow' for nearly all conditions as this generally provides the best balance, which is not to say other options cannot be beneficial with changing tire and track conditions.
